### 3.7 Character Codes

The following figures shows the character codes and the codes allocated to CG RAM. All codes can be used by the CG RAM if not using the internal ROM.

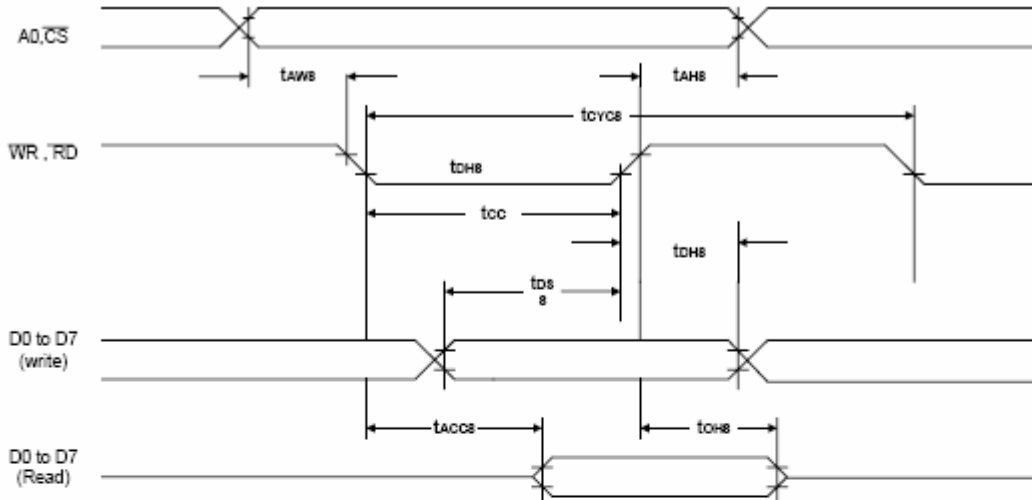

Lower 4bits	Upper 4bits															
	0	1	2	3	4	5	6	7	8	9	A	B	C	D	E	F
0				0	@	P	'	p								
1			!	1	A	Q	a	q

3			#	3	C	S	c	s								
4			\$	4	D	T	d	t								
5			&	5	E	U	e	u								
6			%	6	F	V	f	v								
7			.	7	G	W	g	w								
8			(	8	H	X	h	x								
9			)	9	I	Y	i	y								
A			*	:	J	Z	j	z								
B			+	;	K	[	k	{								
C			,	<	L	¥	l	!								
D			.	=	M	]	m	}								
E			-	>	N	^	n	→								
F			/	?	O	_	o	←								

The diagram below the table shows two memory blocks, CG RAM 1 and CG RAM 2. Arrows point from the bottom of the table to these blocks. A control signal M1 is shown with two states: M1=0 and M1=1. M1=0 is connected to CG RAM 1, and M1=1 is connected to CG RAM 2.

### 3.8 TIMING CHARECTERISTICS

## 7 QUALITY ASSURANCE SPECIFICATION

### 7.1 CONFORMITY

---

The performance, function and reliability of the shipped products conform to the Product Specification.

### 7.2 DELIVERY ASSURANCE

---

#### 7.2.1 Delivery inspection standards

- IPC-AA610 class 2 electronic assemblies standard

#### 7.2.2 Zone definition

### 7.2.3 Visual inspection

- Inspect under 2x20W or 40W fluorescent lamp (approximately 3000 lux) leaving 25 to 30 cm between the module and the lamp and 30 cm between the module and the eye (measuring position).
- Appearance is inspected at the best contrast voltage (best contrast is adjusted considering clearness and crosstalk on screen).
- Inspect the module at 45° right and left, top and bottom.
- Use the optimum viewing angle during the contrast inspection.

## **7.3 DEALING WITH CUSTOMER COMPLAINTS**

---

### **7.3.1 Non-conforming analysis**

Purchaser should supply Densitron with detailed data of non-conforming sample.  
 After accepting it, Densitron should complete the analysis in two weeks from receiving the sample.  
 If the analysis cannot be completed on time, Densitron must inform the purchaser.

### **7.3.2 Handling of non-conforming displays**

If any non-conforming displays are found during customer acceptance inspection which Densitron is clearly responsible for, return them to Densitron.  
 Both Densitron and customer should analyse the reason and discuss the handling of non-conforming displays when the reason is not clear.  
 Equally, both sides should discuss and come to agreement for issues pertaining to modification of Densitron quality assurance standard.

## 8 RELIABILITY SPECIFICATION

### 8.1 RELIABILITY TESTS

#### Standard Temp

Test Item	Test Condition	Evaluation and assessment
High Temperature Operation	50°C ±2°C for 240 hours	No abnormalities in function* and appearance
Low Temperature Operation	0°C ±2°C for 240 hours	No abnormalities in function* and appearance
Thermal Shock Storage	-20°C (30 min) ->25°C (5 min) - >70°C (30 min) - >25°C (5 min) 5 cycles	No abnormalities in function* and appearance
Vibration	10Hz ~ 55Hz 0.3mm / 1 Octave 55Hz ~ 500Hz 3g / 1 Octave 20 cycle / per axis	No abnormalities in function* and appearance

#### Wide Temp

Test Item	Test Condition	Evaluation and assessment
High Temperature Operation	70°C ±2°C for 240 hours	No abnormalities in function* and appearance
Low Temperature Operation	-20°C ±2°C for 240 hours	No abnormalities in function* and appearance
Thermal Shock Storage	-30°C (30 min) ->25°C (5 min) - >80°C (30 min) - >25°C (5 min) 5 cycles	No abnormalities in function* and appearance
Vibration	10Hz ~ 55Hz 0.3mm / 1 Octave 55Hz ~ 500Hz 3g / 1 Octave 20 cycle / per axis	No abnormalities in function* and appearance

\* Current consumption 3 times initial value

\* Contrast > ½ initial value

### 8.2 LIFE TIME

Item	Description
1	Function, performance, appearance, etc. shall be free from remarkable deterioration within 50,000 hours under ordinary operating and storage conditions of room temperature (25±10 °C), normal humidity (45±20% RH), and in area not exposed to direct sunlight.

## 9 PART NUMBER DESCRIPTIONS FOR AVAILABLE OPTIONS

### LMR①855②③240G320④⑤⑥

- ① 4 = LED backlight version  
6 = CCFL backlight version
- ② **POLARIZER TYPE**  
B = Transflective: light background  
E = Transmissive: dark background
- ③ **BACKLIGHT COLOUR**  
W = White or left blank for CCFL type
- ④ **FLUID TYPE AND POWER SUPPLY**  
W = Wide Temperature Range; on-board negative supply voltage generator  
H = Wide Temperature Range  
S = Standard Temperature range; on board negative supply voltage generator  
D = Standard Temperature range; negative supply voltage required
- ⑤ **TEMPERATURE COMPENSATION**  
C = with on board temperature compensation circuitry  
N = **No** on board temperature compensation and NTN Fluid
- ⑥ **FLUID TYPE**  
F = FSTN  
B = STN ( Blue Mode )

## 10 HANDLING PRECAUTIONS

### *Safety*

If the LCD panel breaks, be careful not to get the liquid crystal fluid in your mouth or in your eyes. If the liquid crystal touches your skin or clothes, wash it off immediately using soap and plenty of water.

### *Mounting and Design*

Place a transparent plate (e.g. acrylic, polycarbonate or glass) on the display surface to protect the display from external pressure. Leave a small gap between the transparent plate and the display surface.

When assembling with a zebra connector, clean the surface of the pads with alcohol and keep the surrounding air very clean.

Design the system so that no input signal is given unless the power supply voltage is applied.

### *Caution during LCD cleaning*

Lightly wipe the display surface with a soft cloth soaked with Isopropyl alcohol, Ethyl alcohol or Trichlorotrifluoroethane.

Do not wipe the display surface with dry or hard materials that will damage the polariser surface.

Do not use aromatic solvents (toluene and xylene), or ketonic solvents (ketone and acetone).

### *Caution against static charge*

As the display uses C-MOS LSI drivers, connect any unused input terminal to VDD or VSS. Do not input any signals before power is turned on.

Also, ground your body, work/assembly table and assembly equipment to protect against static electricity.

### *Packaging*

Displays use LCD elements, and must be treated as such. Avoid strong shock and drop from a height. To prevent displays from degradation, do not operate or store them exposed directly to sunshine or high temperature/humidity.

### *Caution during operation*

It is indispensable to drive the display within the specified voltage limit since excessive voltage shortens its life.

Direct current causes an electrochemical reaction with remarkable deterioration of the display quality.

Give careful consideration to prevent direct current during ON/OFF timing and during operation.

Response time is extremely delayed at temperatures lower than the operating temperature range while, at high temperatures, displays become dark. However, this phenomenon is reversible and does not mean a malfunction or a display that has been permanently damaged.

If the display area is pushed on hard during operation, some graphics will be abnormally displayed but returns to a normal condition after turning off the display once.

Even a small amount of condensation on the contact pads (terminals) can cause an electro-chemical reaction which causes missing rows and columns. Give careful attention to avoid condensation.

### *Storage*

Store the display in a dark place where the temperature is  $25^{\circ}\text{C} \pm 10^{\circ}\text{C}$  and the humidity below 50%RH.

Store the display in a clean environment, free from dust, organic solvents and corrosive gases.

Do not crash, shake or jolt the display (including accessories).
